Peer Review of Linus Anderson la222tc

Written by Frida Holmström fh222dt

As a developer would the model help you and why/why not?

Yes, but maybe more as a first drawing of finding conceptual classes. [1, p 143]. You have good attributes [1, p 158].

Do you think a domain expert (for example the Secretary) would understand the model why/why not?

No, because the secretary doesn't see himself in the model. It would be better with a specific class for each member type. [1, p 146]

What are the strong points of the model, what do you think is really good and why?

Calendar has a description class [1, p 147]. Good associations drawn, but lacks naming [1, p 152].

What are the weaknesses of the model, what do you think should be changed and why?

I find it hard to understand were calendar fits in the model, maybe it is missing an association? [1, p 149]. The image attributes of boat may not help the model, and I can't find it in the requirements for this iteration. I'm also not able to understand how requirement 1 is modeled in your model.

Do you think the model has passed the grade 2 (passing grade) criteria?

I'm not really shore about it because of the missing requirements, but it is also stated to be contradictory. [1, p 168]
